

Academic **Majors** Data Report  
LaGuardia Community College  
Fall 2011

Institutional Research & Assessment  
November 30, 2011

Please send us feedback on this report. We have chosen to focus on majors rather than majors/options simply because of the formatting problems of working with a large number of areas, many of which have few students. We can run this report for groups of options, if you would like to send us a request.

In all displays, we have deleted majors with fewer than nine students.

Table 1 (p. 4) displays Fall 2011 enrollment by major with each major's gender breakdown and percentages by race/ethnicity. Some majors continue to be dominated by women, others by men. A degree of ethnicity preference can also be found in this chart.

Table 2 (p. 5) displays Fall 2011 credit loads by major, showing the percentage full-time and the average number of credits and equated credits. (Equated credits include developmental courses and freshmen seminar equivalents.) Nursing students, for example, carry a very low credit load. This table also presents average age, showing that School Food Services Management serves an older group of students. The final two columns give the percentage of students born outside of the US and the percentage of non-native English speakers. Accounting, for example, serves both these populations.

Table 3 (p. 6) displays average cumulative GPA, total credits attempted, total credits earned, and the percentage of students with transfer credits by major. Digital Media Arts is a new major, and students have accumulated few credits. Students who have no GPA (only attempted developmental courses, for example) are excluded in the average GPA computation.

Table 4 (p. 7) displays the distribution of credits earned through Spring 2011 by major. Digital Commercial Photography majors appear closer to graduation than other majors. Please note the credit ranges are not of equal size. Therefore, the expected distribution of students is not even across the ranges.

Table 5 (p. 8) displays testing results, showing the percentage of students having passed developmental requirements. As a new major, fewer than half of Criminal Science majors have completed math developmental education requirements, for example.

Table 6 (p. 9) takes a look at changes among majors over the three year period, beginning Fall 2008 and ending Fall 2011. Over that time there were 35,073 unique degree students enrolled. (Students who began in one major and received a degree, then began work in another major were counted as two unique students.) We examined the beginning and ending majors of each of these students. Students who began and ended in the same semester with the same major were included as having the same first and last major. Fall 2008 was used as the initial semester for students who began before Fall 2008. The number of students who changed to a new major between their first and last semester in that period divided by the total number of students who started the period in that major gives the percentage that changed majors OUT. That same number (of those who changed) divided by the number in their final semester in that major,

gives the percentage that changed majors IN. As a new major, Writing and Literature has a high percentage of major changes IN. As a major with difficulty getting started, Radiologic Technology has had a high percentage of major changes OUT.

Tables 7 (p. 10) and 8 (p. 11) show the proportion of the same 35,073 unique students who have transferred early and graduated. Table 7 breaks this down by the first major in the Fall 2008 to Fall 2011 period, while Table 8 breaks this down by the last major in that period. The percentage of graduated students that have transferred is also shown by major. Liberal Arts: Math & Science appears to have produced a relatively large number of early transfer students. Many of the computer areas have graduated a high proportion of their enrolled students during this period. Business Administration has produced a large number of graduates who have transferred to other colleges.

Note: These are **not** Graduation **Rates** or Early Transfer **Rates**. Rates are determined by following cohorts of students. The percentages in Table 7 and Table 8 are proportions of enrolled students, showing the amount of change by transfer and graduation of students in various majors. These proportions are affected by the mix of students. Majors with more new students will, of course, have lower proportions of graduates, for example.
